

Inventory Management & Stock Control SOP

1. Stock Governance Overview

Proper inventory control ensures accurate stock valuation, eliminates shrinkage, and alerts store managers to reorder low-stock items before stockouts occur.

2. Standard Operating Rules

- **Receiving Stock:** All incoming shipments must be received via *Purchases* -> *Receive Stock* with supplier invoice attached.
- **Barcode Labeling:** Ensure all items have scannable barcodes or quick-browse tiles assigned.
- **Stock Count Recounts:** Perform weekly spot counts on high-velocity items and monthly full catalog inventory audits.
- **Damaged Stock Write-offs:** Record damaged or expired stock under *Inventory* -> *Stock Adjustments* -> *Damaged* to post proper loss entries.
